Tailored Application Access for Enhanced User Experience

ABSTRACT:

User Story:-

GlobalTech Solutions was facing challenges with their internal ServiceNow instance. Their employees from various departments needed specific applications and modules that were only relevant to their roles. However, the existing setup in ServiceNow provided a generic view to all users, leading to confusion and inefficiency.

Pre-Requisites:-

1. Knowledge on Service Now Administration.
2. Knowledge on Applications & Modules.

Skills used to solve the problem statement:-

1. Service Now Administration.

Two Major Method :

Implementation

Result

Implementation:

1. Open service now developer Instance
2. Click on All
3. Search for Tables.
4. Under System Definition select Tables
5. Then click on New.

6. Fill the Details as:

Label : Service Request

Name : Auto-Populated

Add module to menu : Select Create New

Leave everything as Default.

Table - New Record

* Label: Service Request

* Name: u_service_request

Extends table:

Application: Global

Create module: ☒

Create mobile module: ☒

Add module to menu: -- Create new --

New menu name: Service Request

2. Select the user you have been created and click on Impersonate user.
3. Go to All >> search for Service Request
4. Then you can find The Application(Service Request) and Modules(Create New, All)

Conclusion:

Tailored Application Access for Enhanced User Experience in ServiceNow refers to the customization of access to applications and modules based on user roles and needs. This approach ensures that users only see the applications and data relevant to their specific tasks, which simplifies the user interface and reduces cognitive overload.

By configuring user roles and permissions, administrators can grant or restrict access based on job roles, departmental needs, or geographical locations. This personalization enhances workflow productivity and ensures that employees have the necessary resources while keeping sensitive data secure.
